Bayer’s MICROLET® lancing device is designed for obtaining capillary blood samples from the fingertips.

1. Prepare the puncture site.

   - Wash your hands with soap and warm water. Dry your hands with paper towels or warm air.
   - Rinse and dry thoroughly.

2. Remove the endcap.

   - In one hand, hold the MICROLET 2 lancing device with your thumb on the endcap dial and finger tips. Rinse and dry thoroughly.
   - Firmly push the endcap straight into the lancing device.
   - After you hear or feel the "click", continue pushing until the endcap is fully engaged and a complete stop.
   - Twist off the cap.
   - Set the cap aside and save for disposal of used lancet.

3. Hold the MICROLET 2 lancet and rotate the protective cover, fully releasing the capsule with the outer cover.

4. Replace the adjustable endcap.

   - Place the MICROLET 2 lancing device firmly against the puncture site, with the blue release button. The lancet will slightly extend. Do not rotate the finger tips.

5. Select any of the five puncture depth settings by rotating the dial on the endcap to a shallower puncture or larger drop depth.

6. Place the MICROLET 2 lancing device firmly against the puncture site, with the blue release button. The lancet will fully extend. Do not rotate the finger tips.

   - Note: if you need to re-cock the lancing device, firmly pull past resistance and the endcap will remain in place.

7. To form the blood drop, press a shallow puncture site for a few seconds. Hold and grip firmly against the puncture site. Do not rotate the finger tips.

8. Test immediately after the blood drop has formed.

   - Take the lancing device off the cap, dry tissue and maintain pressure on the bleeding site.

9. Wipe the puncture site.

   - Carefully remove the endcap from the puncture site. Do not remove. Always replace the endcap each time you test.

10. To remove the used lancet, firmly pull the endcap off.

   - After the blood drop is formed, the endcap will fall into the container.

   - Place the protective cap that you used to plunger the blue release button each time you test.

   - The used lancet will fall into the container.

   - Place the protective cap onto a flat surface with the Bayer logo facing down. With the lancet used still in the MICROLET 2 lancing device, push the protective cap firmly against the center of the cap.

   - Re-cock the lancing device by firmly pulling past resistance and the endcap will remain in place.

Potential Biohazard: Always dispose of the used lancing properly. Never dispose of used lancet on any surface or in any container that is used for other purposes. If you need assistance or have questions about blood glucose testing, please contact Bayer Diabetes Care Helpline at 1-800-268-7200.

Clean your MICROLET 2 lancing device after every use with a solution of nine parts water and one part mild detergent or two parts bleach. Slightly moisten a tissue with the solution. Important: Avoid excessive moisture. Remove the excess moisture from the device and interior of the cap. Dispose of the device and interior of the cap as shown.

IMPORTANT: Do Not Reuse. Always replace the endcap each time you test. Do not use the MICROLET 2 lancing device on more than one person.

DIRECTIONS FOR USE:

- After the blood drop is formed, the endcap will fall into the container. Place the protective cap that you used to plunger the blue release button each time you test. The used lancet will fall into the container. Place the protective cap onto a flat surface with the Bayer logo facing down. With the lancet used still in the MICROLET 2 lancing device, push the protective cap firmly against the center of the cap. Re-cock the lancing device by firmly pulling past resistance and the endcap will remain in place.
